

KRISHILOOP

Make every harvest count.

less food wasted, more value for farmers.

A circular agribusiness idea for Nepal

Good food goes unsold. Farmers earn less.

surplus

Good food without a market.

farm income

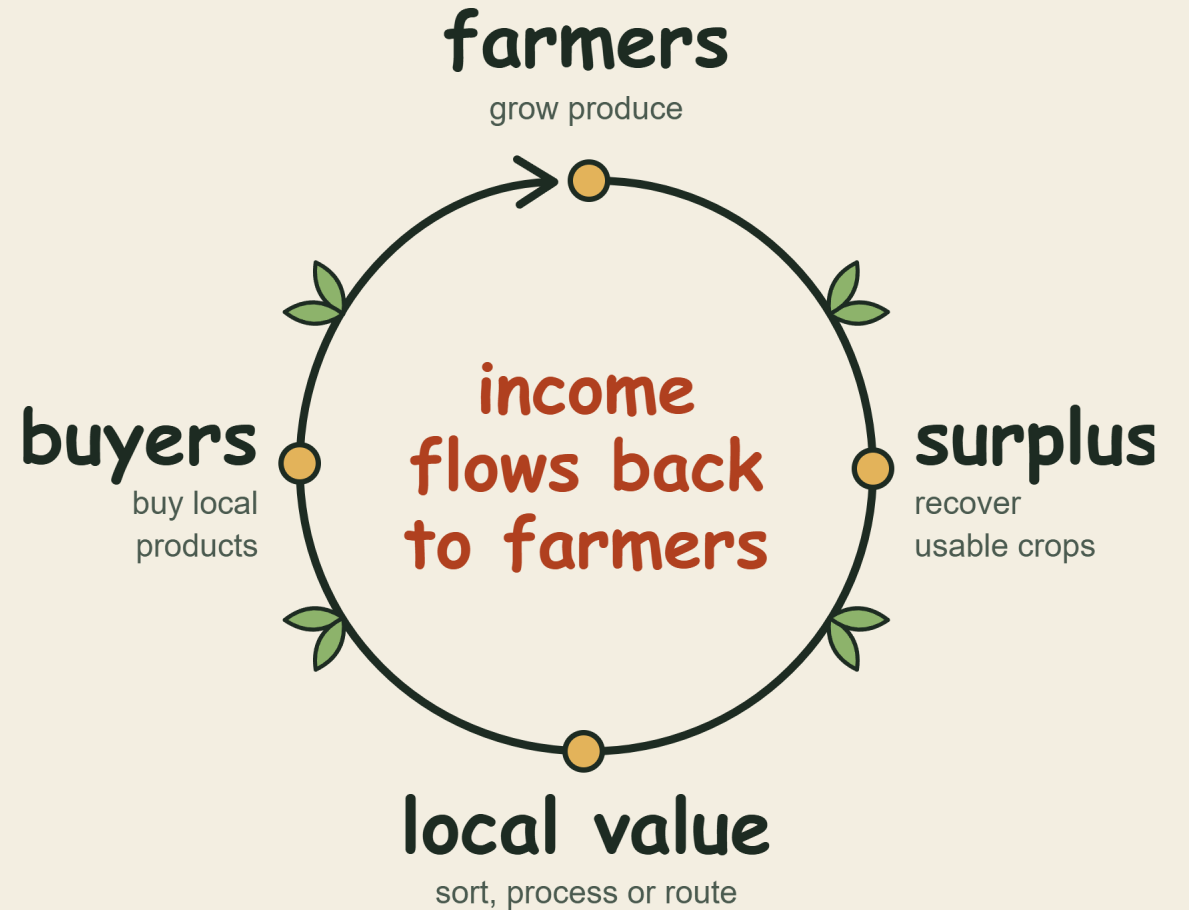

Value that does not make it back
to the farmer.

The opportunity: keep more value moving through local agriculture.

KrishiLoop keeps value moving

A local loop can turn surplus produce into new value.

A simple model to test

Start with one crop and one local market.

- 1 Collect** Identify usable surplus with farmer groups.

- 2 Prepare** Sort and handle produce for its best next use.

- 3 Match** Connect supply with local buyers or processors.

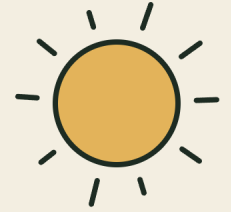

- 4 Return value** Track sales and pay farmers transparently.

proposed flow, so check it locally before scaling

Value for the whole local chain

Potential value created by the loop

farmers

More ways to earn

A buyer for produce that may otherwise go unsold.

buyers

Local supply with purpose

Useful products sourced closer to where they grow.

communities

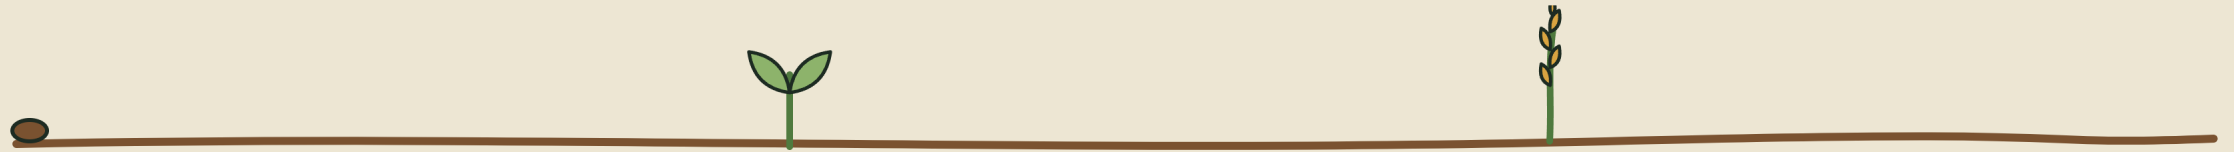

Less edible food discarded

More of the harvest stays in productive use.

Prove the loop in one pilot

Learn fast, measure what matters, then expand.

choose

Select one crop, one farmer cluster and one buyer type.

run

Move a small batch through collection, handling and sale.

review

Compare recovery, sell-through and farmer payment per kg.

track: kg recovered · farmer payment per kg · share sold

KRISHILOOP

Turn surplus into shared value.

recover more of the harvest. return more value to farmers.
